Natural Avlanche N Face of Sunset/Wolverine

Wolverine Peak Cooke City 1/14/2023 Code SS-N-R1-D1.5 Aspect N Latitude

Longitude

45.04690

-110.00100

Notes

We observed a north-facing natural sluff turn into a reasonable <u>slide</u> release over the cliff bands from the ridge line between Miller and Wolverine today while skinning on the flat bench above the road out to Wolverine Peak today. I think it released right at Sunset peak. It may have started with a <u>cornice</u> release but was more like <u>wind</u> <u>loading</u> on the steep face. We also saw some minor cracking on north facing wind loaded roll overs above the bench. We opted to descend low-angle trees back to our sled and to go ski Henderson.

Number of slides

1

Number caught
