Republic Creek Avalanches

Republic Creek Cooke City 1/10/2024 Code SS-N-D2 Elevation 9000 Aspect E Aspect Range W, E, NE Latitude 44.98550 Longitude -109.94100 Notes

From email on 01/13: "Toured into Republic creek with our class. Noted two D2 soft <u>slab</u> avalanches. One on a west <u>aspect</u> and the other on an east <u>aspect</u> at about 9000'. I estimate the crown was 15-40cm deep and likely ran on the same layer as other recent avalanches in the area."

From email on 01/13: "From Miller Ridge today, I had a brief look into Sheep Creek, and to the mountains south of Cooke City, and observed 7 fresh <u>slab</u> avalanches (that happened in the last 1-3 days). Will send photos of them later if I can get better views.

Most of them were on NEerly aspects, and appeared to be on the new/old Jan. 5th interface. Mid and upper elevations, most commonly in wind loaded terrain. Some propagating a few hundred feet wide. "

From email on 01/14: "One crown on the Middle Siren, probably part of the last cycle."
