

Recent avalanche activity in Cedar Basin

Date

Tue, 01/28/2025 - 13:30

Activity

Skiing

Recent avalanches noted on the NE-E aprons on cedar mountain. SS-N-R2-3-D2-I These appeared to have possibly happened during the last storm cycle and looked to be isolated to layers within the new old snow interface. I also noted similar activity on the same aspects on the adjacent ridge during our approach.

Region

Northern Madison

Location (from list)

Cedar Mtn.

Observer Name

Reneé Freeman
